Subject Index

A

Acoustic emission monitoring, damage accumulation, unidirectional glass reinforced composites, 237
Amorphous metallic ribbons, reinforcing thermoplastic composites, influence of hot compaction pressure on interfacial properties, 404
Amorphous metal ribbons, thermoplastic composites, low volume fraction reinforcement, mechanical properties and fracture of, 411
Anisotropic plates
  determination of material properties nondestructive method, 293
  Rayleigh's method, 306

C

Carbon fiber, electrochemical polymerization, xylene derivatives, 191
Composite curing, effect on temperature profile, effects of graphite fiber and epoxy matrix, physical properties, 122
Composite laminates, instrumented puncture impact characterization, printed circuit board applications, 75
Composite materials
  reinforcement distribution, energy dispersive analysis of X-rays, 447
  single fiber, fragmentation monitoring, 436
Composites
  monitoring curing process, fluorescence-based fiber-optic sensor, 96
  optimizing fiber wetout, manufacturing, 81
Composite structures, real time cure monitoring, techniques of mechanical impedance analysis, 66
Concentrated suspensions, Newtonian matrices, dilatancy, 226
Cure monitoring, composite stuctures, mechanical impedance analysis techniques, 66

E

Epoxy blends, epoxy-graphite fiber interface, mechanical properties, effect of ^{60}Co gamma radiation, 153
Epoxy-graphite fiber interface, epoxy blends, mechanical properties, effect of ^{60}Co gamma radiation, 153
Epoxy matrix composites, high performance, viscoelastic characterization, 273
Epoxy prepreg processing, effect of advancement, dielectric analysis, 87

F

Fiber coatings, reactive and non-reactive, effects on performance of graphite/epoxy composites, 213
Fiber composites, interlayer, interphasial regions, 377
Fiber mats, preplaced, flow simulation in molds, 391
Fiber/nylon-6 composites, E-glass, effect of water absorption on behavior, 333
Fiber reinforced thermoplatics, slit flow, rheological behavior and fiber orientation, 137
Fiber reinforcements, compressibility and relaxation, during composite processing, 13
Fiber wetout, optimizing, composites manufacturing, 81
Fibrous composites, controlled energy dissipation, microscopic failure mechanisms, 57
Fragmentation phenomenon, continuous monitoring, single fiber composite materials, 436

G

Graphite/epoxy composites
  reactive and non-reactive fiber coatings, effects on performance, 213
  single, interfacial adhesion in, effect of surfactant treatments, 281
Graphite fiber and epoxy matrix, physical properties, effects on temperature profile, during cure, 122
Graphite/thermoplastic spacecraft structures, minimum-gage, maximum-stiffness, 108

I

Interfacial adhesion, in single graphite/epoxy composites, effect of surfactant treatments, 281
Interfacial shear strength, dependence on matrix and interphase properties, 48
Interphase properties, matrix properties, dependence on interfacial shear strength, 48

J

J-integral concept, description of toughness properties, fiber reinforced polyethylene composites, 320

K

Kevlar fibers, reinforcing poly(methyl methacrylate), dynamic mechanical behavior, 428

L

Long fiber thermoplastic composites, molding materials, low temperature impact properties, 119

M

Matrix properties, interphase properties, dependence on interfacial shear strength, 48
Microcomposites, significance as experimental models, 233
Molding materials, long fiber thermoplastic composites, low temperature impact properties, 119
Molds, preplaced fiber mats, flow simulation, 391
Multilayer fiber reinforcements
  permability characteristics, experimental observations, 179
  permeability characteristics, theoretical model, 186

N

Narmco 5208 carbon-epoxy prepreg, room-temperature aging, physical, mechanical, and nondestructive characterization, 203

P

Particulate composites, design, optical applications, 39
PEEK/carbon fiber ±45° angle-ply laminates, failure morphology, 327
PEEK/carbon fiber prepreg tapes, structure development, dyamics of double curvature part formation, thermoforming of advanced thermoplastic composites, 338
PMR polyimide composites
  crosslinking-property relationships, 126
  N-phenylnadimide modified, dynamic mechanical properties, 133
Polyester resins, glass-laminated unsaturated, thermally stimulated current, 384
Poly(ether ether ketone), short fiber composites, kinetics of strain-induced crystallization, during injection molding, 169
Polyethylene composites, fiber reinforced, J-integral concept for description of toughness properties, 320

Polymer composites
ballistic response, 196
polypyrrole impregnated conducting, electromagnetic interference shielding, 289
Poly(methyl methacrylate), with Kevlar fibers, dynamic mechanical behavior, 428
Polypropylene/low density polyethylene blend matrices
short glass fiber based composites, morphology, fiber orientation, 7
short glass fibers, compounding method, effect on mechanical properties, 1
Prepreg composites, radiation-curable, 91
Puncture impact, characterization, printed circuit board applications, 75

R

Resin injection molding
molds with preplaced fiber mats
numerical simulation/experiments of mold filling, analysis, 30
permeability and compressibility of measurements, analysis, 20

S

Sheet molding compound, surface composition, effects of molding conditions, 315
Short glass fiber based composites, polypropylene/low density polyethylene blend matrices, morphology, fiber orientation, 7
Single-fiber-composite test, acoustic emission measurements, 370
Strain-induced crystallization, kinetics, short fiber composites of poly(ether ether ketone), injection molding, 169

T

Thermoplastic composites
advanced
instrumented thermoforming, prepregs in forming double curvature parts, relative performance, 354
thermoforming, single curvature parts, 257
amorphous metal ribbons as reinforcement, influence of hot compaction pressure on interfacial properties, 404
continuous fiber reinforced, diaphragm forming, 246
instrumented thermoforming, dynamics of double curvature part formation, structure development from PEEK/carbon fiber prepreg tapes, 338
Thermoplastic resins and, dynamic mechanical analysis, 102
with low volume fraction of reinforcement, amorphous metal ribbons, mechanical properties and fracture, 411
Thermoplastic fabrics, commingled, consolidation, 417
Thermoplastic resins, thermoplastic composites, dynamic mechanical analysis, 102
Thermoplastics, short fiber reinforced, weld-line characteristics, 161
Thermosetting matrices, woven fabric reinforcements, permeability and capillary pressure, simultaneous measurements, 146

U

Unidirectional glass reinforced composites, damage accumulation via acoustic emission monitoring, 237

W

Water absorption, effect on behavior of E-glass fiber/nylon-6 composites, 333
Woven fabric reinforcements, thermosetting matrices, permeability and capillary pressure, simultaneous measurements, 146

X

Xylene derivatives, carbon fiber, electrochemical polymerization, 191
